Introduction

NIDI's Annual Reports provide a summary overview of NIDI's work. The 2005 report is the first to be published as an electronic document only. Up-to-date information about the Institute's activities can be found on our website (www.nidi.nl).

Comments and suggestions regarding all our activities are welcome.

Frans Willekens

Director

The Hague, November 2006

1. NIDI

NIDI is the national demographic institute of the Netherlands. Founded in 1970 as a joint initiative of Dutch universities, it gained an independent status in 1987. In 2003, NIDI was affiliated to the Royal Netherlands Academy of Arts and Sciences (KNAW). Working ‘at the heart of science’, the Academy’s mission is to promote scientific research in the Netherlands. Fundamental research carried out today will provide a basis for the applied research of tomorrow and, in turn, for the practical application of science in the future.

NIDI has a multidisciplinary staff of some 60 researchers and other professionals, including demographers, geographers, sociologists, economists, statisticians and historians. Fellows and students from the Netherlands and abroad visit the Institute on a regular basis and help carry out its programme. NIDI staff are organised into three research departments and one Support Services Department. The support services include financial management and human resources, ICT, information and publications and secretarial services.

Changes in the growth, size and composition of the population in terms of age (‘dejuvenation’ and ageing), household composition, ethnicity and geographical distribution are closely linked to social trends in a variety of domains, such as the economy, labour market, social security, education, welfare, housing, transport and infrastructure, as well as to socio-cultural trends such as individualisation and secularisation. These population trends, and the underlying dynamics of demographic change processes, such as fertility, the formation and dissolution of relationships, internal and international migration, mobility and mortality, directly and indirectly affect a host of policy issues.

As a national demographic institute, NIDI studies population issues in their social context. To this end, the Institute is firmly rooted in science and society and draws inspiration from the interplay between demographic and related social issues.

Socially relevant research into population issues is the core of NIDI’s strategy.

Mission and Goals

NIDI's *mission* is to provide more insight into demographic developments and related social and policy issues in a national and international context. The Institute seeks to achieve its mission through (1) conducting top-quality scientific research into population issues (its core activity), and (2) disseminating demographic knowledge and information among the scientific community, policymakers and society at large and making this information more understandable.

NIDI has built up and continues to develop a knowledge infrastructure for population issues.

NIDI is a unique national, and leading international research institute for population issues, and its *goal* is to further develop this position. Whilst continuing to have a solid grounding in the Netherlands, NIDI has opted to secure a position as a European institute. Its research is driven by social relevance, scientific inquisitiveness and a demand for knowledge.

Strategy

NIDI's strategy serves as the basis for the achievement of its mission and the realisation of its goals. The following premises underlie its strategy:

- Its research focuses on socially inspired research questions. The desire to solve social issues is an important source of inspiration when selecting research topics.
- NIDI must continue to convince government and society at large of the importance of demographic research for making informed choices about social trends. This requires special attention to the transfer of knowledge and information on population issues.
- NIDI's research has an interdisciplinary approach, which is firmly rooted in demography as its core discipline. Demographic behaviour is situated in a context made up of various levels: The individual life course, the historic context and the changing social environment. Life course, generation and social interdependence are the core concepts.
- NIDI is *the* demographic centre of excellence in the Netherlands and is set to further develop into a leading centre of excellence in Europe with a solid grounding in the Netherlands.
- A financially sound institute with a well-balanced workforce is a prerequisite for the successful implementation of its mission.

The strategy is structured around a coherent set of theoretical (explanations of demographic behaviour), analytical (methods and models) and empirical (primary and secondary data) frameworks. The *theoretical* framework of NIDI's strategy focuses on demographic behaviour in the context of the life course, with a strong emphasis on the social and historical context (generation) and the dynamics of social interdependence. The *analytical* framework of NIDI's strategy focuses on the study of demographic processes during the course of people's lives from a cohort perspective. The *empirical* framework supports the strategy with a mix of cross-sectional and longitudinal data, where existing data are used to their full potential and new, preferably longitudinal data are collected.

A central element of its strategy is its focus on a limited number of research priorities in terms of programming. A professional attitude, a performance-driven approach and distinct, identifiable products are central to this strategy.

Acquisition

Over the years NIDI has extended its scale and scope by acquiring external research funds. Today about 70 percent of the institute's annual income originates from sources other than the KNAW and is acquired on a competitive basis. A financially sound business operation is a prerequisite for the successful implementation of the Institute's mission and the realisation of its goals. NIDI's budget incorporates demanding acquisition targets for each of the research departments.

Despite a strong interest in population issues in today's society, the market for scientific research into population issues is unfavourable. Three factors have contributed to that development. First, in recent years the Netherlands government ministries cut back in long-term programme funding. Second, other major clients have redefined what they consider core activities and have started to carry out themselves activities they used to outsource. Third, national and international clients increasingly expect research institutes to co-finance projects by 'matching' research grants. This is putting more and more pressure on NIDI's equity position.

The Institute's acquisition strategy is (a) to give priority to longer term contracts in an effort to avoid fragmentation, (b) to achieve a greater diversification of sources of income with a view to spreading risks, and (c) and to adopt a proactive acquisition approach, emphasizing research lines and products for

which NIDI is known. Examples are the MicMac population forecasting programme that builds on the well-known LIPRO research, the WPRB policy research programme, the Resource Flows programme in the field of health systems studies, the NWO-VIDI population ageing research programme (pensions), the Netherlands Kinship Panel Survey (NKPS) and research into the Second Demographic Transition.

A proactive approach requires a greater emphasis on relationship management and on increasing the visibility of the institute in refereed journals and the international scientific debate.

2. Research

NIDI's principal task is to conduct research into population issues. The Institute studies past, present and future population trends as well as the backgrounds to these trends and their social consequences.

NIDI's research programme is structured around flexible themes that reflect the Institute's mission. The topics studied change over time, in an effort to keep abreast of both scientific developments and changes in national and international social and policy contexts. Research projects are usually carried out by multidisciplinary teams of researchers; more often than not, researchers participate in various projects. Flexibility is considered to be a major asset of NIDI's approach.

NIDI's research is organised into three departments: 'Social Demography', 'Projections and Migration' and 'Population and Development'.

The activities of the three research departments in 2005 are set out in the following.

2.1. Social Demography Department

Research staff

Kène Henkens (head of department)
Aat Liefbroer (head of department)
Gijs Beets
Susan ter Bekke (student trainee)

Christoph Schwierz (Postdoc – EU Research Training Network)
Jolanda van Sluijs (student trainee)
Hanna van Solinge (PhD candidate)
Judith Soons (PhD candidate)
Mathieu Starink
Helga de Valk (PhD candidate)
Katalin Velladics (Postdoc – EU Research Training Network)

The demographic behaviour of the population of the Netherlands, as in other western societies, has undergone major changes in recent decades. Young adults are spending more years of their lives on their own, they are postponing the formation of relationships and family formation, and more and more relationships are falling apart. Children are growing up in more complex family set-ups. Women are attaching greater importance to having a job and more and more women now remain in the labour force after the arrival of children. Not only are couples postponing childbirth, they are also having fewer children, and the number of childless couples is growing. Changes in demographic behaviour are not only taking place in the first half of the life course. The lives of older adults have also seen many changes. Whilst women now continue working until a more advanced age, men are retiring earlier than ever before. As couples are having fewer children and the average life expectancy is increasing, people are spending more years of their lives without their children. Older people want to live independently as long as possible and are trying to avoid ‘institutionalisation’.

These changes in demographic behaviour are related to the growing complexity of our society. This may be attributed in part to the ongoing social processes of individualisation, globalisation and a reshaping of the welfare state. This complexity appears to be putting increasing pressure on social cohesion. As a result, people are facing dilemmas in shaping their own lives (in terms of their families, jobs and wider social networks). At the same time, the relationship between the wishes and behaviour of individuals at the micro level and what is desirable and sustainable at the macro level has come under pressure too. In this light, people in the Netherlands now set great store by a reassessment of fundamental shared norms and values and are addressing the question as to how these values can be passed on to others within and outside the family. Despite this focus on norms and values, individual responsibility is becoming more

important when taking decisions. People today are expected to make choices based on their own rational considerations, and to face the consequences of their choices. Making demographic choices, most of which have far-reaching implications for people's lives, has become all the more difficult as a result. Not only do people have access to much more information than they did in the past, but their decisions also need to be aligned with the decisions of others (such as their partners or children) and reconciled with activities in other domains of life. The life course perspective is the main basis for the research activities of the Social Demography Department in 2005.

Demographic behaviour does not only have implications for the lives of individuals, but also has an impact at the macro level. The population of the Netherlands is ageing rapidly as a result of the declining number of children and increasing life expectancy. At the same time, the composition of the population is changing in terms of household type, marital status, ethnicity, health status and employment status.

The department has a focus on four closely related research themes. The first two themes focus on two extremely relevant stages of the life course – from a demographic point of view. These are the stage of young adulthood and the third stage of life. The two other themes relate to research covering the entire life course, in part bringing together the first two themes, namely research into intergenerational relationships and research into the relationship between demographic trends and government policy. Below we will briefly describe the most important new developments concerning each of these four themes.

The first research theme, transition to adulthood, focuses on the micro- and macro-determinants of leaving the parental home, partnership and parenthood. These life-course transitions are studied in a European context. The research uses NIDI's own data (NKPS, PSIN) as well as data provided by others (FFS, the Dutch Survey on Family Formation [Onderzoek Gezinsvorming, OG] and other retrospective surveys). In 2005 a new wave of the panel study of the social integration of young adults (PSIN) was organized. The data will be used in a project funded by the Netherlands Organisation for Scientific Research (NWO) that examines the implications of life course changes for the well-being of young adults; Judith Soons is preparing a PhD thesis on the subject (Project 1.101.08).

Research into the third phase of life focuses on the causes and consequences of events in people's employment histories (retirement) and household histories (union dissolution as a result of widowhood and divorce). This research studies both the individual and the social implications of such events. The consequences for individuals are studied in a project subsidised by the NWO into the causes and implications of early retirement (Project 1.500.05). In 2005 a VIDI grant was awarded for 'The process of retirement: A dynamic and multi-actor perspective'. The social implications are addressed in a study of ageing in the labour market, a project concluded in 2005 and carried out jointly with experts from Europe and North America (Project 1.500.01). Another topic studied is the influence of life course factors on health and mortality. Here, too, the researchers draw on both NIDI's own data and data provided by the Historical Sample of the Dutch Population (HSN). NIDI's approach can be characterised by its long-term perspective, at both macro and micro level. NIDI is also involved in a large-scale survey of the relationship between life circumstances in early childhood and health in adulthood (Project 1.203.05). This international comparative research is financed by the American National Institute of Ageing (NIA). Another theme is how culture relates to public health, in particular health differences between ethnic groups. Here, we can draw an interesting parallel with the marked differences in health between religious groups in the recent past. In this light, studies of the cultural —religion-based— differences in mortality in the past serve a useful purpose in explaining the present-day situation (Project 1.202.01).

Research into intergenerational relationships is set to benefit substantially from the findings of the Netherlands Kinship Panel Study, NKPS (Project 1.103.01). In this large-scale survey of family relationships in the Netherlands, various family members are interviewed twice during the course of a period of three years. This set-up allows the researchers to study how, and to what extent, solidarity manifests itself and changes within families. From a demographic point of view, this study offers a whole host of leads for further research into themes such as changes in the structure of families, the influence of family circumstances on demographic choices, and the implications of changing demographic circumstances on the way in which family networks function. The project also offers an excellent opportunity to link the study of the nuclear family to the study of the extended family. NIDI initiated two PhD projects as part of the NKPS, both of which look into the influence of families on decisions relating to family formation taken by adolescents of foreign and Dutch descent (Project 1.103.02) and solidarity and conflict

within families (Project 1.103.03). Micro-oriented research will derive particular benefit from the NKPS data. This line of research also has a macro component, however, which focuses on the relationships between birth cohorts. The population of older adults is changing constantly as new, younger cohorts who have different life experiences, habits and values join the ranks of the elderly population. A central research question is how individual experiences and the events that take place during the course of people's lives affect their well-being in later life. The main interests are the causes and implications of the diversity in life courses. Finally, NIDI worked on a long-term comparative analysis of the effectiveness of interventions aimed at the prevention and alleviation of loneliness among the elderly (Project 1.200.10).

The fourth theme of NIDI's research in the domain of social demography relates to the mutual relationship between demographic behaviour and government policy. How does government policy —intentionally and unintentionally— affect demographic behaviour? Attitudes about population issues —in particular their policy aspects— are studied in the ongoing NIDI survey of Opinions and Attitudes on Aspects of Population Issues (MOAB) (Project 1.400.02). This survey focused on policy in a European context. Conversely, how does the changing demographic behaviour of individuals affect government policy? In order to answer this question, NIDI pays continuous attention to the description and analysis of demographic trends in their social context. The activities of the Working Group for the Periodic Reporting on Population Issues (WPRB) play a central role in this respect. In 2005 preparations started for the eighth study of the WPRB, which will focus on the demography of the four largest cities of the Netherlands (Project 1.401.04). Demographic trends affect society at large, not only in the Netherlands but in all countries of Europe. The European dimension is addressed in a similar European study carried out on behalf of the European Commission. The project, led by NIDI, is being conducted by a consortium of leading European institutes and a network of European experts (Project 1.401.05).

Ongoing Projects in 2005:

- 1.100.00 *Fertility trends in the Netherlands and Europe*
- 1.100.02 Late and low fertility: Childlessness
- 1.100.03 The Second Demographic Transition
- 1.100.07 Relationship dissolution in Europe

- 1.101.00 *Fertility and life courses*
- 1.101.02 Preferences, values and norms regarding the formation of relationships and fertility behaviour
- 1.101.08 Life course trajectories and well-being among young adults
- 1.101.09 Demography of young adults and intergenerational transfer
- 1.101.11 Households in transition - a policy-oriented analysis (HIT)

- 1.102.00 *Family formation from a historical perspective*
- 1.102.03 Nuptiality in the Netherlands, 1815-1970

- 1.103.00 *Demography of family relationships*
- 1.103.01 Netherlands kinship panel study (NKPS)
- 1.103.02 Family ties and the behavioural choices of young people: A survey among migrant and non-migrant population groups in the Netherlands
- 1.103.03 Solidarity and conflict in family relationships
- 1.103.04 From generation to generation; transmission of work-family patterns and exchange of support between parents and children
- 1.103.05 Antecedents and consequences of childlessness

- 1.200.00 *Living arrangements of the elderly*
- 1.200.12 Major ageing and gender issues in Europe (MAGGIE)

- 1.202.00 *The long-term development of public health*
- 1.202.01 Infant mortality in Europe
- 1.202.03 Religious denomination and infant and child mortality

- 1.203.00 *Health differentials*
- 1.203.05 Inequality in longevity from a life course perspective: The Netherlands 1850-2000

- 1.205.00 *Demographic studies of population groups*

- 1.400.00 *Periodic surveys on population issues*
- 1.400.02 Survey of opinions and attitudes on aspects of population issues (MOAB)
- 1.400.03 Population policy acceptance in Europe

- 1.401.00 *Periodic reporting on population issues*
 1.401.04 Population issues in the Netherlands (WPRB 2006)
 1.401.05 Monitor social situation in the European Union (Observatory)
- 1.500.00 *Demography and the labour market*
 1.500.01 Labour force participation and the income position of the elderly
 1.500.05 Early retirement: Determinants of and implications for health, personal relationships and well-being
 1.500.08 The process of retirement: A dynamic and multi-actor perspective

Projects concluded in 2005:

- 1.100.06 Gender and Generations Programme
 1.101.07 From youth to adulthood: The Netherlands in a European perspective
 1.200.09 Diversity in late life
 1.200.10 Comparative effectivity study of interventions to prevent and alleviate loneliness among the elderly
- 1.201.00 *International research into living arrangements and ageing*
 1.500.07 The joy of working longer

Key publications in 2005:

- Dalen, H. van, K. Henkens, The rationality behind immigration policy preferences. In: *De Economist* 153(2005)1, pp. 67-83.
- Dykstra, P., T. van Tilburg, J. de Jong Gierveld, Changes in older adult loneliness: results from a seven-year longitudinal study. In: *Research on aging* 27(2005)6, pp. 725-747.
- Liefbroer, A., Valt de appel nog steeds niet ver van de boom?: over intergenerationele overdracht van demografisch gedrag: inaugurele rede VU Amsterdam, 16 June 2005. Amsterdam: Vrije Universiteit, 2005. 29 p.
- Liefbroer, A., The impact of perceived costs and rewards of childbearing on entry into parenthood: evidence from a panel study. In: *European journal of population - Revue européenne de population* 21(2005)4, pp. 367-392.

2.2. Projections and Migration Department

Research staff:

Joop de Beer (head of department)

Erik Beekink

Peter Ekamper

Rob van der Erf

Christine Follana (Postdoc – EU Research Training Network (RTN))

Nicole van der Gaag

George Groenewold

Liesbeth Heering

Corina Huisman

Jeannette Schoorl

Ernst Spaan

René Wetters

Huseyin Kaya (trainee)

Projections and scenarios are an essential element of demographic research. Projections of the future size and structure of the population are based on assumptions about changes in demographic variables, such as fertility, mortality, migration and household dynamics. The results of demographic projections form the basic input for many prospective, planning and policy studies dealing with the future allocation of resources. In Europe, for example, population ageing, the growing size of migrant populations and the slower growth of the labour force will have a profound effect on many sectors of society. The activities of the Projections and Migration Department include both the development of methods for making projections and the analysis of data needed to specify the assumptions. Particular research focus is placed on patterns and processes of international migration and the social integration of migrants and their children.

Two international research projects in which NIDI plays a coordinating role were embarked on in 2005. One of the projects aims to develop a new projection model (MicMac), the other seeks to provide and analyse new internationally comparable data on the integration of second-generation migrants in eight European countries (TIES).

The MicMac project combines macro and micro approaches to making projections. At the macro level, demographic events and transitions are modelled to produce cohort biographies; at the micro level, life courses of individual cohort members are modelled. This four-year research programme started in 2005, under the title 'Bridging the micro-macro gap in population forecasting'. The project aims to develop a new demographic projection model that can be used by both national and international agencies to monitor and project demographic developments and their consequences for healthcare and pension systems. The programme is funded by the European Commission under the Sixth Framework Programme and is carried out by a consortium of researchers from eight European research institutes coordinated by NIDI.

Under the title 'The Integration of the European Second Generation', the TIES project seeks to study the integration of migrant children (the second generation) on the basis of a survey held in eight European countries. Since immigration tends to be an urban phenomenon, the project will be carried out in 15 big cities. The focus will be on two immigrant groups and a native control group. In view of the international set up of the project, TIES will be able to make comparisons across ethnic groups and countries. This will contribute not only to a better understanding, but also to the development of policies aimed at improving social integration. The project started in 2005 and is coordinated by IMES in Amsterdam. NIDI's tasks involve the organisation of the Dutch survey and international coordination of the production of the questionnaire and sampling design. The project is funded by organisations in various European countries. NIDI's responsibilities are funded by the Volkswagen Stiftung, the Ministry of Justice and the municipalities of Amsterdam and Rotterdam.

Other research projects of the Projections and Migration Department are the collection and processing of European national and regional demographic and migration statistics, the preparation of several Eurostat publications (funded by Eurostat), scenarios of the elderly population by marital status, educational attainment, health status and living arrangement for nine EU countries (the FELICIE project, which is funded by the European Commission under the Fifth Framework Programme), the projection of the size and composition of the civil service in the Netherlands (funded by the Government Buildings Agency), the production of a report on Moroccans in the Netherlands (funded by the Ministry of Justice) and the development of a simulation model for the demography of firms (in collaboration with the University of Groningen).

Several projects were concluded in 2005: An evaluation of demographic scenarios published by the municipality of The Hague (funded by the Municipal Council of The Hague), projections of the ageing of the police workforce (funded by the Ministry of the Interior), participation in a study on migration and asylum statistics in the EU countries (the THESIM project funded by the European Commission under the Sixth Framework Programme), the organisation of an international workshop on migration in Manila (funded by the Asia-Europe Foundation, the European Alliance for Asian Studies and the Swiss Foundation for Population, Migration and Environment) and an analysis of return migration in several African countries (as part of a project on the push and pull factors of international migration).

Ongoing projects in 2005:

- 2.700.00 *Developing and applying models*
- 2.700.02 Simulation models for manpower planning in the civil service

- 2.702.00 *European population projections*
- 2.702.17 Future elderly living conditions in Europe (FELICIE)
- 2.702.25 Bridging the micro-macro gap in population forecasting (MicMac)

- 2.703.00 *Demography of firms*
- 2.703.01 Developing a simulation model SIMFIRMS 3

- 2.706.00 *Population statistics Eurostat*
- 2.706.01 Eurostat's national and regional population statistics

- 2.300.00 *Consequences of international migration*
- 2.300.11 International migration, integration and social cohesion in Europe (IMISCOE)
- 2.300.12 The integration of the European second generation (TIES)

- 2.302.00 *International migration trends*
- 2.302.06 Asylum seekers and refugees in Europe

Projects concluded in 2005:

- 2.300.06 Asian immigrants and entrepreneurs
- 2.300.08 Migration policy and attitudes
- 2.300.10 Determinants and consequences of Antillean/Caribbean migration
- 2.301.06 Push and pull factors of international migration
- 2.302.09 Database high level working group on asylum and migration
- 2.700.16 Projections of the manpower of the police workforce
- 2.700.18 Evaluation of demographic scenarios for The Hague
- 2.702.16 Research training network on demographic sustainability and European integration
- 2.706.07 Towards harmonised European statistics on international migration (THESIM)

Key publications in 2005:

- Dalen, H.P. van, G. Groenewold, T. Fokkema, The effect of remittances on emigration intentions in Egypt, Morocco and Turkey. In: *Population Studies* 59(2005)3, pp. 375-392.

The Population and Development Department focuses on global population issues. The size, composition and geographical distribution of the world's population are the result of a whole host of factors relating to fertility, health, mortality and migration. In the developing world, family formation is closely related to healthcare, in particular to reproductive health. Many people in developing countries have no access to, or insufficient access to healthcare facilities that are generally available in countries such as the Netherlands. Whereas the greatest problem used to be a lack of healthcare facilities, the problem many countries now face is that healthcare is becoming less affordable. The provision of sexual and reproductive healthcare in particular, including family planning and the prevention and treatment of HIV/AIDS, is in jeopardy. Without affordable healthcare, poverty prevention, a decline in child mortality, safe motherhood and most other Millennium Development Goals (MDGs) set by the United Nations will never go beyond resolutions.

Strategic choice

In 2005 NIDI made the strategic choice to focus its Population and Development research activities on one research thrust: Health systems in developing countries and how they affect the availability and affordability of healthcare. A health system is taken to mean the totality of actors and activities aimed at promoting, improving and maintaining good health. Affordable healthcare means the provision of healthcare at reasonable cost, for both governments and the private sector (companies, households). The Population and Development Department has further honed its focus on sexual and reproductive health. In doing so, the department will be able to delve more deeply into the subject matter and hopefully yield new scientific insights and create greater relevance to society.

Resource Flows

Research today tends to approach healthcare as a system. The actors, activities and financial transactions in this system are increasingly studied with the aid of Health Accounts. NIDI has charted global resource flows for population activities since 1997. This project, commissioned by and carried out in cooperation with the United Nations Fund for Population Activities (UNFPA) and —since 1999— with UNAIDS, is known internationally as the UNFPA/UNAIDS/NIDI Resource Flows Project. The resource flows relate to spending on four areas of population activities in developing countries and countries in transition: Family planning, reproductive health, sexually transmitted diseases (including HIV/AIDS), and population policy and the collection and analysis of demographic data. The project was evaluated by UNFPA in 2003. One of the recommendations was to incorporate the resource flows charted into a system of Health Accounts. In response to this recommendation, the Resource Flows Project developed a system of Reproductive Health Accounts (RHA) in 2004-2005. Fieldwork for the first RHA began in the Indian state of Karnataka at the end of 2004, in cooperation with the Centre for Multidisciplinary Research (CMDR) in Dharwad, Karnataka, India.

The fieldwork includes a family budget survey and surveys among suppliers of sexual and reproductive healthcare (both public and private sector), companies and NGOs. The results of the fieldwork were released at the end of 2005.

The Resource Flows Project was evaluated by UNAIDS in 2005. The evaluation committee's recommendations have been incorporated in the Resource Flows Project's new research programme.

Since the introduction of the 'status aparte' in Aruba, when the island gained independence from the Netherlands, the Aruban government has involved NIDI in the development of a statistical system for the island. NIDI initially cooperated with the Central Bureau of Statistics, and since 2005 with the Public Health Department (DVG) of the Ministry of Public Health and the Environment. NIDI and DVG are jointly developing a health information system for policy purposes. This project includes research conducted in 2005 into the amount of money spent by the population on healthcare (medical consumption) and socio-economic differences in this respect. The health

information system will be extended to include a national health account in 2006.

NIDI was approached by the World Health Organization (WHO) in 2005 with a request to draw up guidelines for the development of RHAs. These *Guidelines* are now being developed in cooperation with Partners for Health Reform^{plus}, a project implemented by Abt Associates in Washington. The guidelines will be published in 2006. NIDI was also approached by CMDR (Dharwad, India) in 2005 to contribute its expertise to the development of State Health Accounts by CMDR for three Indian states, a project funded by the European Union.

One of the key elements of health system reform in developing countries is the concept of *cost sharing*. The World Bank proposed introducing a system of *user fees* for healthcare users as early as in 1987. As there is little insight into household spending on healthcare, in particular sexual and reproductive healthcare, NIDI took the initiative to chart user fees based on out-of-pocket expenditure surveys within the framework of its Resource Flows Project. The very first out-of-pocket expenditure survey was held in Nepal in 2005, in cooperation with the Center for Research on Environment, Health and Population Activities (CREHPA) in Kathmandu.

In 2005, the Indian Institute for Health Management Research (IIHMR) in Jaipur in the Indian state of Rajasthan was involved in the collection of data about spending on population activities. The data gathered by the IIHMR with the aid of a postal survey are checked and subsequently sent to NIDI via the Internet on a weekly basis, where they are processed within the framework of the Resource Flows project. The cooperation between NIDI and the IIHMR will be evaluated in 2006 and —depending on the outcome of the evaluation— further intensified.

HERA

Self-efficacy and empowerment are key concepts in the HERA research programme (HEalthy reproduction: Research for Action), which has been conducted jointly by NIDI and the Population Research Centre (PRC) of Groningen University since 1996. Within this context, Alinda Bosch obtained a doctorate in 2005 on the reproductive health of adolescents in Bangladesh. Ongoing PhD research in the HERA programme includes a study by Ajay Bailey (PRC) of HIV/AIDS risk perception among male migrants in Goa, India, and a study by Biswamitra Sahu (PRC) of the influence of religion on

reproductive health in India and Bangladesh, a research project funded by NWO/WOTRO.

Refugees

The Population and Development Department places a special focus on vulnerable groups. One of the most vulnerable groups in today's society are refugees. In 2005, NIDI and the United Nations High Commission for Refugees, UNHCR, embarked on a study into the living conditions and coping mechanisms of groups of refugees in four countries: Internally displaced persons in Sri Lanka, illegal asylum seekers in Ecuador and refugees in Armenia and Pakistan. In line with international poverty policy, special attention is given to studying refugees' living conditions in terms of the UN Millennium Development Goals.

Ongoing projects in 2005:

- 3.600.00 *Key demographic statistics*
- 3.600.05 Research and integration, sources of information Aruba

- 3.601.00 *Reproductive health*
- 3.601.05 Healthy reproduction: Research for action (HERA)

- 3.604.00 *Monitoring and policy*
- 3.604.01 Financial resource flows for population and AIDS activities (RF)
- 3.604.05 Millennium Development Goals for refugees and IDPs

Projects concluded in 2005:

- 3.600.06 Demographic surveillance systems, Bangladesh
- 3.601.04 Adolescent reproductive health in Bangladesh
- 3.601.06 Spandana: Reproductive health in Dharwad, India
- 3.601.13 Poverty, gender and HIV/AIDS risk behaviour
- 3.604.03 Reproductive health monitoring and evaluation

Key publications in 2005:

Ahmed, M., J. van Ginneken, A. Razzaque, Factors associated with adolescent abortion in a rural area of Bangladesh. In: *Tropical medicine and international health* 10(2005)2, pp. 198-205.

- Willekens, F.J., *Towards a system of reproductive health accounts*. NIDI Report 68, 2005. 97 p.

3. Other activities

NIDI carries out activities that are closely related to its research task and its role as a national institute and that are designed to strengthen the knowledge infrastructure for population issues.

3.1. Scientific policy advice

Disseminating demographic knowledge and information for policymakers, and more specifically scientific policy advice, is an important task. Many of NIDI's activities in this field are conducted within the framework of the Working Group for the Periodic Reporting on Population Issues (WPRB), which was set up by the Minister of Education, Culture and Science in 1983 in an effort to coordinate the study of population issues by the Dutch government. The Working Group is chaired by NIDI. The WPRB seeks to inform the government, based on scientific objectivity and independence, about national and international demographic trends, about related social issues and about the policy aspects of these issues. The next WPRB Report has been scheduled to appear in 2006 and will focus on urban issues (Project 1.401.04). The WPRB Report plays an important role in raising the Institute's social profile.

In an effort to strengthen its international position, NIDI has, since 2005, conducted research within the framework of the 'European Observatory to inform the Social Policy Debate and to Provide Analytical Input for the Report on the Social Situation in the European Union' on behalf of the Employment, Social Affairs and Equal Opportunities Directorate-General of the European Commission. The study is designed to inform the European Commission about demographic and socio-economic trends and related policy issues in Member States and candidate members of the European Union and in Turkey (see Project 1.401.05). Since this EU project has much common ground with the WPRB Report, it can be seen as a first step towards the implementation of the strategic goal to set up a European counterpart of the WPRB.

NIDI also provides scientific policy advice through its contribution to the activities of the Commission on Population and Development of the United Nations (CPD), the Council of Europe's European Population Committee (CAHP), the United Nation's Economic Commission for Europe (UNECE), the European Commission and the Demography Platform of Statistics Netherlands.

The Institute also advises on an ad hoc basis, such as for the United Nations Fund for Population Activities (UNFPA) in Kazakhstan in 2005. We expect that the nature of the work for the Council of Europe will change in 2006 following the planned discontinuation of the CAHP's activities.

3.2. Training and education

Training demographic researchers is an important aspect of building and maintaining a knowledge infrastructure for population issues. Many of NIDI's activities in training and education are carried out in close cooperation with university demography departments in an effort to combat the erosion of demographic studies at university level. NIDI's training and education activities also have a strong international dimension.

In the Netherlands, NIDI cooperates with a number of universities on a long-term basis, in particular with the University of Groningen, and plans are being drawn up to further strengthen their partnership, where possible including other universities. NIDI and Groningen University are involved in a joint research programme on reproductive health (see also Project 3.601.05) and two professors (Hutter, Demography, and Van Wissen, The Demography of Firms) were seconded to NIDI on a part-time basis in 2005. The Institute has also joined forces with the Netherlands Interuniversity Center for Social Science Theory and Methodology (ICS) in matters relating to PhD programmes.

In 2005, several NIDI staff members held professorships at Dutch universities, such as the Vrije Universiteit Amsterdam (The demography of young adults and intergenerational transfers, Liefbroer), University of Groningen (Population Studies, Willekens), and Utrecht University (Kinship Demography, Dykstra). Guest lectures are given on an ad hoc basis (see Appendix).

NIDI has been involved in the training programme of the Institute of Actuaries in Woerden since 1999. This institute is closely associated with the Netherlands Actuarial Society. NIDI is responsible for the 'Demography and Demometry' module in the Institute's actuarial vocational training course. On a smaller scale, ongoing training is provided for trainees of Dutch and foreign universities.

NIDI's activities in the domain of international post-graduate education have largely been conducted within the context of the International Max Planck Research School for Demography (IMPRSD). IMPRSD is a joint venture

between a large number of European organisations in which the Max Planck Research School for Demography (MPIDR) in Rostock plays a pivotal role. In this programme students and lecturers are 'pooled'.

NIDI also participates in the Research Training Network Demographic Sustainability and European Integration (RTN-DEMOG). This network, funded by the Fifth Framework Programme of the European Commission, brings together the most important European institutes and is coordinated by the Max Planck Institute. The programme offers young researchers an international research position at one of the participating institutes. The scholars selected are supervised by a senior researcher and are offered the opportunity of taking part in training courses and seminars. The programme began in 2002 and will end in early 2006. In 2005, RTN trainees participated in attitude research (Velladics), research into international migration (Follana) and time use analysis (Schwierz). Another initiative in 2005 was the organisation in September, in partnership with the University of Southampton, of an RTN Workshop on 'The estimation of international migration in Europe: Issues, models and assessment'.

NIDI was one of the initiators of the new European Doctoral School of Demography (EDSD), which was established in September 2005. The school is run under the auspices of the European Association for Population Studies (EAPS) and aims to offer the best possible training programme for demographic researchers in tomorrow's Europe, place demographic processes in a European perspective, and raise the identity of new generations of demographic researchers. The training programme extends and builds on existing programmes for researchers offered by the IMPRSD and a number of European universities with a critical mass of PhD students in demography. EDSD offers an eight-month core training programme for about twenty PhD students. The Max Planck Institute in Rostock (MPIDR) has offered to host the programme during the first years of its existence. In light of NIDI's goal to raise its profile as a European institute, the EDSD could serve a useful purpose as a recruitment pool for future NIDI staff members. The Institute offered three scholarships to EDSD for the university year 2005-2006 and contributed to the school's training programme.

NIDI also regularly organises demographic and other training programmes related to research with a development focus, such as training for the Resource Flows project and the HERA programme.

3.3. Scientific associations

Another way in which NIDI maintains the knowledge infrastructure is through its support of Dutch and European scientific associations and, starting in 2006, through its involvement in the International Union for the Scientific Study of Population (IUSSP), a leading international professional association for individuals interested in population studies.

The Institute offers administrative support to the Netherlands Demographic Society (NVD). NIDI has provided its Secretary (Tineke Fokkema) and holds a seat on the Board. NIDI staff are regularly involved in organising scientific activities for this professional association, one of the oldest of its kind in the world. In 2005, the NVD, NIDI (Helga de Valk and Ruben van Galen) and the Population Research Centre of Groningen University jointly organised the first Dutch Demography Day to mark the Society's 35th anniversary. More than 50 papers were presented during the 12 parallel sessions and a plenary session. To encourage young researchers, NIDI sponsored this highly successful conference—held partly in the English language—by awarding a prize for the best Master's thesis presented. The prize went to Jolanda van Sluis of Tilburg University for her thesis on 'The effects of life course transitions on feelings of satisfaction among young adults.' The prize consisted of a certificate and 500 euros. NIDI will publish a selection of the papers presented at the meeting..

NIDI has been actively involved in the European Association for Population Studies (EAPS) since its inception in 1983. In addition to providing secretarial services for this professional association, NIDI maintains the EAPS website, produces the EAPS Newsletter and offers administrative support. NIDI is also strongly represented on the EAPS Council, currently providing its Vice President (Van Nimwegen) and Executive Secretary (Beets). NIDI is engaged in the EAPS Committee on Education (Willekens, chair) (see Section 3.2), the Working Group on International Migration in Europe (Schoorl, co-chair) and the Working Group Second Demographic Transition (Liefbroer, co-chair).

The Institute is also directly involved in two publications produced under the auspices of EAPS, with Frans van Poppel as co-editor of the European Journal of Population and Gijs Beets as Secretary of the European Studies of Population series. The Association's primary activity is the organisation of the bi-annual European Population Conferences (EPCs). In 2005, NIDI was active in the

preparations for the next EAPS conference, which will be staged in Liverpool in 2006.

NIDI's involvement in EAPS is seen as a key aspect of its goal to raise the Institute's international profile. Its activities for the global network of demographers, IUSSP, should also be seen in this light. Nico van Nimwegen submitted his candidacy as Secretary General and Treasurer of the International Union for the Scientific Study of Population at the invitation of IUSSP's Council. He was elected to this position at the end of 2005.

3.4. Conferences and workshops

In 2005 NIDI was involved in the preparations for, and organisation of several national and international conferences, symposiums, workshops and other events in the field of population:

- **ASEF/EAAS workshop 'Contemporary migrations in Asia and Europe: Exploring transnationalism, multiple linkages and development'**, Manila, 11-14 January 2005.
- **NVD seminar 'Integration of migrants' [Integratie van allochtonen]**, 10 February 2005.
- **Workshop on Loneliness among the elderly [Eenzaam en dan?: de (on)mogelijkheden van interventies bij ouderen]**, The Hague, NIDI, 11 May 2005.
- **Panel session on 'Governing international migration'**, CERES Summer School on 'Governance for social transformation', The Hague, Institute of Social Studies, 27-30 June, 2005.
- **Workshop 'Estimation of international migration in Europe: Issues, models and assessment'**, organised by the Southampton Statistical Sciences Research Institute and NIDI, as part of the Research Training Network, funded by the European Commission, Southampton, 28-30 September 2005.
- **Dutch Demography Day 2005**, Utrecht, 6 October 2005.
- **Workshop 'Simulation methods in longitudinal data'**, Programme 'Quantitative methods in the social sciences', European Science Foundation, Hasselt, University of Hasselt, 6-14 October 2005.
- **Workshop 'Population and development'**, Conference 'Aids and reproductive health: Everybody's business', Ministry of Foreign Affairs, Scheveningen, 24-28 October 2005.

- **ICS symposium ‘Influencing the Life Course’ [De maakbaarheid van de levensloop]**, Utrecht, 14 November 2005.
- **Symposium ‘Men who are not fathers: Who are they and how might they age?’** at the 58th Annual scientific meeting of the Gerontological Society of America, Orlando, 18-22 November, 2005.
- **Conference on ‘Postponement of childbearing in Europe’**, in cooperation with the Vienna Institute for Demography and Bocconi University (Milan), Vienna, 1-3 December 2005.

4. Finance

NIDI's annual budget provides the financial underpinning for its research programme. The Institute keeps a close tab on its financial status with the aid of quarterly financial reports and a project administration in the form of a Management Information System (MIS), with time recording and an hourly rate system.

The Operating Budget totals around €5,700,000. NIDI has in the past proven to be successful in acquiring external research funding. The trend has shifted from a more or less structural form of core funding to project funding, with a gradual transition to 'matching', in particular for research projects funded by governmental and non-governmental organisations other than the Dutch Ministry of Education and Science/KNAW, in particular the Netherlands Organisation for Scientific Research (NWO). Core funding is provided as a lump sum by the Royal Netherlands Academy of Arts and Sciences (KNAW) and constitutes 40 percent of the funds received by the Institute. The remaining 60 percent are temporary resource flows. The ratio of permanent to temporary staff is the exact opposite (60:40), which is positive in terms of continuity but at the same time makes the Institute vulnerable.

Project funding is provided by national and international organisations such as the Netherlands Organisation for Scientific Research, the United Nations and the European Commission, and ranges from short-term to long-term commitments.

On 1st January 2003, NIDI changed its legal status to that of an institute of the Royal Netherlands Academy of Arts and Sciences (KNAW). NIDI's annual figures for 2005 were reported in the KNAW's annual accounts and as such included in Ernst & Young Accountants' audit of the KNAW holding. In preparing the accounts, NIDI adhered to the new models for the presentation of financial statements required since the consolidation. The KNAW was set up in 1808 by Royal Decree of the then King Louis Napoleon, thus giving it legal personality. In 1992, the object and legal personality of the Academy were laid down in the Higher Education and Research Act (Bulletin of Acts and Decrees 1992, No. 593). The legal personality *sui generis*—i.e. deriving directly from an Act of Parliament—is specified in Article 1.16 of the Act and is also referred to as being that of a 'legal person with a statutory task'. Because the Academy derives its legal personality directly from an Act of Parliament and is therefore

not a legal entity in the sense of an association, foundation or private limited company, it is not registered with any of the Dutch Chambers of Commerce.

Operating Statement for the year 2005

(amounts in €x 1,000)	Actual 2005	Budget 2005	Actual 2004
Income			
Basic funding	1,727	1,727	1,713
Other income	64	33	105
General income	1,791	1,760	1,818
<i>Earmarked funds</i>			
Programme funding	403	400	227
Project funding	1,853	2,235	2,165
Other funding	185		
Total income	4,232	4,511	4,210
Expenses			
Personnel costs	3,076	3,001	3,374
Material costs	1,257	1,503	1,049
Total expenditure	4,333	4,504	4,423
Operating result	-101	7	-213

Notes to the Operating Statement

Income from contracted research had initially been budgeted at €2,429,000, based in part on committed funding and in part on ongoing proposals that could reasonably be assumed to lead to a funding commitment. As the additional acquisition target was estimated at €205,000, estimated income from contracted research in the 2005 Budget totalled €2,635,000.

The Institute reported an operating loss of € 101,000 in 2005. This may be attributed in part to delays in the commencement of a number of new projects. As this was offset by additional revenues, the operating result from projects remained more or less unchanged.

As is customary, the loss was charged to the general reserve, which subsequently decreased from €1,493,000 at 31 December 2004 to €1,392,000 at 31 December 2005.

Statement of Assets and Liabilities at 31 December 2005

(amounts in €x 1,000)	2005	2004
Assets		
<i>Tangible fixed assets</i>		
Inventory and office equipment	187	236
<i>Receivables, prepayments and accrued income</i>		
Accounts receivable	3,986	3,523
Liquid assets	2,903	5,560
	6,889	5,560
Total assets	7,076	5,796
	2005	2004
Liabilities		
Equity	1,392	1,493
Provisions	107	112
<i>Liabilities and accruals and deferred income</i>		
Short-term debts	454	618
Project obligations	5,123	3,573
	5,578	4,191
Total liabilities	7,076	5,796

5. Organisation

NIDI is an institute of the Royal Netherlands Academy of Arts and Sciences (KNAW). The Institute is led by Frans Willekens, Director, and Deputy Director Nico van Nimwegen. The Director has been fully mandated to manage the Institute, as set out in the KNAW's Mandate Rules for Management.

NIDI has three research departments and a Support Services Department. Following a review of its research activities in 2005, as a result of which the migration research programmes came under the Projections Department, NIDI now has a Social Demography Department (SoDem) (13.9 FTEs), headed by Kène Henkens and Aat Liefbroer, a Projections & Migration Department (ProMig) (10.2 FTEs), headed by Joop de Beer, and a Population & Development Department (P&D) (6.3 FTEs), headed temporarily by Frans Willekens.

The Support Services Department (12.3 FTEs), headed by Nico van Nimwegen, is responsible for all services in support of the Institute's research activities (the primary process) and comprises the units Finance and Human Resources Management (4.6 FTEs), Information and Communication Technology (2.0 FTEs), Information and Publications (2.0 FTEs) and Secretarial Services (3.7 FTEs). The Finance and Human Resources Management unit is in charge of Financial Affairs, Personnel Management, and Facility Management (reception, housekeeping and other infrastructural affairs). In addition to supporting NIDI's directors in matters relating to personnel (collective labour agreements, legal status, conditions of employment, training and education, health and safety management, sick leave and other forms of leave, and legislation and regulations regarding social security, pensions and taxation), Personnel Management is the staff's primary point of contact for all questions and assistance relating to personnel matters. The Information and Publications unit includes the library and documentation department, public relations and editorial services.

The heads of department and NIDI's Director and Deputy Director together form the Management Team.

NIDI has its own office building (approx. 1,200 m²) and about 60 workspaces.

5.1. Supervisory Committee

NIDI joined the Academy in 2003. A Supervisory Committee was formed for a period of five years to oversee the implementation of the agreement governing the affiliation of NIDI to the Academy. The Committee is made up of the members of NIDI's former board:

W.J. Deetman	chair
Dr G. Elzinga	vice-chair
P.H.M. Kuys	treasurer
Professor Dr J.A. van Ginkel	member
Dr A.D. Wolff-Albers	member

5.2. Scientific Advisory Board

The Scientific Advisory Board advises NIDI and the Academy in matters relating to the Institute's research programme, in particular the nature, the direction and the quality of scientific research. Advice given by the Board can be both solicited and unsolicited. The Board is appointed by the Academy.

Periodic external evaluation of NIDI is provided by an Academy-appointed evaluation committee, once every six years, following the so-called Standard Evaluation Protocol for Public Research Organisations in the Netherlands. A mid-term internal evaluation is also carried out. The next external evaluation is scheduled for 2007.

The Scientific Advisory Board meets once a year.

The Board comprises at least three and at most seven members who are appointed by the Academy for a period of five years and may be reappointed for the same term once. NIDI's director acts as the administrative secretary to the Board in his capacity as the Institute's director and has an advisory vote at the Board's meetings.

The Scientific Advisory Board has the following members:

Chair:

Professor Dr Guillaume Wunsch Emeritus Professor of Demography, University of Louvain, Institute of Demography, Louvain-la-Neuve, Belgium

Members:

Professor Dr Han Entzinger Erasmus University, Faculty of Social Sciences, Professor of Migration and Integration Studies, Rotterdam

Professor Dr Nico Keilman University of Oslo, Department of Economics, and Statistics Norway, Professor of Demography, Oslo, Norway

Professor Dr Clara Mulder University of Amsterdam, Faculty of Social and Behavioural Sciences, Department of Geography, Planning and International Development Studies, Amsterdam

Professor Dr Joop Schippers Utrecht University, Utrecht School of Economics (UU), Professor of Labour Economics and the Economics of Equal Opportunities, Utrecht

Professor Dr Jan Vandenbroucke University of Leiden, Clinical Epidemiology, Leiden University Medical Centre, Leiden

Professor Dr James Vaupel Max-Planck-Institute for Demographic Research, Rostock, Germany

5.3. Staff

NIDI's personnel policy is based on a strategy in which education and mobility are core concepts. The introduction of Personal Development Plans (POPs), scheduled for 2006, is a key element of this policy. The POPs align the professional development of individual staff members to the development goals of the Institute as a whole and underline the need for ongoing education and development. The introduction of the POPs was delayed due to another large-scale operation, the introduction of a new university job classification system (UFO) for all KNAW staff. This operation was carried out almost entirely during the course of 2005 and aims to improve the transparency of the staff

organisation and the remuneration system pursuant to the collective labour agreement (CAO), which also applies to NIDI.

The main policy conclusions of an internal evaluation, carried out in 2005, of the department structure introduced in 2001 are: 1) there are no reasons to change the existing department structure, and 2) in principle, the implementation of the new strategy, which focuses on research thrusts, is in line with the department structure.

At the end of 2005, NIDI had 49 staff (44.8 FTEs) on its payroll, excluding fellows and trainees, 35 of whom (32.5 FTEs) were research staff and 14 (12.3 FTEs) were support staff. The Institute's workforce is expected to be further reduced in 2006 in light of its tight financial situation. NIDI will strive to bring the skewed relationship between core and temporary financing on the one hand and permanent and temporary staff on the other into better equilibrium. As the Institute's permanent staff ensure the continuity of its activities and the effective mentoring and guidance of temporary staff, a somewhat higher percentage of permanent staff than the percentage core funding is considered acceptable if the permanent staff bring in continuous funding. Having said that, in order to ensure sound business operations and to stimulate flexibility, the number of temporary academic staff as a percentage of the total academic staff will need to increase.

NIDI staff as at 31 December 2005

	Number	Male	Female	FTEs
Research Staff*	36	21	15	33.5
Support Staff	15	5	10	12.9
Total on payroll KNAW	51	26	25	46.4
Other (on average)	10	4	6	
Total	61	30	31

Monique Verlinden	Secretary

Reception and Housekeeping

Anne den Hollander	Reception
Tamara de Ridder	Reception (from 2 November)
Monique van der Plas	Reception
Amrietpersad Niranjana	Housekeeping and Catering

Information and Communication Technology (ICT)

The migration to Windows XP was completed at the beginning of 2005, after which MS Office 2003 was installed as the standard package. All PC's were replaced in parallel with this transition to ensure that NIDI's computers meet the requirements of the new software. The Institute's hardware is replaced on the basis of a fixed depreciation schedule. A project was started in 2005 to ensure that NIDI's staff have access to their files and e-mail when they are outside the office. The project will be completed in early 2006 with the gradual replacement of Pegasus Mail and the migration to the groupware e-mail package, Groupwise.

Information and publications

NIDI's activities in this area focus on making available demographic information and on disseminating this information among a variety of target groups within and outside the Institute. Instruments to disseminate demographic

information include a library collection and documentation facilities as well as a publication programme that is open to third parties, a NIDI website and Intranet.

Library and documentation

NIDI's library has an extensive collection of books, journals, conference proceedings, statistics and articles on demography and related subjects. It seeks to develop, keep and make accessible a comprehensive collection of demographic publications by Dutch authors as well as publications about the Netherlands. The library and its documentation facilities are freely accessible to anyone interested in population issues.

Improving and carrying out the library's core activities in this digital age is an ongoing task. NIDI's website and its Intranet offer excellent opportunities for this. NIDI is exploring the possibilities of making the growing collection of e-documents full-text searchable. Work on making these documents readily available in a suitable database was begun in 2005.

Publication programme

NIDI's research results are published in national and international journals and books. The Institute's own publication programme, which is also open to external authors, includes:

- *DEMOS, Bulletin on Population and Society*. DEMOS is considered NIDI's most important popular publication and contributes significantly to raising the Institute's identity. The bulletin has ten issues a year and a circulation of over 5000 copies, and is aimed at a broad, general audience in political, policy and education circles. DEMOS is also available on line through the NIDI website. The bulletin occasionally appears in English. To extend its reach, an electronic newsletter targeted at the media is published monthly. The newsletter posts press release-style references to upcoming DEMOS articles and provides information about other NIDI publications. There are plans to investigate the possibilities of a European version of DEMOS.
- The *NIDI Reports* series is published by the Institute itself. Although the reports primarily disseminate research findings of NIDI projects, external authors are also invited to contribute to this series. Since NIDI sets great store by an open-access approach to scientific information, the NIDI Reports are also published on the Institute's website. The format of the reports underwent a facelift in 2005.

- NIDI publishes a small series of *Working Papers*, the design of which was also revamped in 2005. These papers are also posted on the NIDI website.
- NIDI publishes one-off publications, such as the Population Atlas of the Netherlands, which appeared in 2003. An interactive version of the Population Atlas was made available online through the NIDI website in 2005.

Publication of the scientific journal *Bevolking en Gezin*, published jointly by NIDI, the Flemish Centre for Population and Family Studies (CBGS) and the Netherlands and Flemish Demographic Societies, was discontinued at the end of 2004. Attempts to revitalise the ailing Dutch-language journal by attracting new partners and actively trying to increase the number of submitted articles were of no avail. Together with its negative cost-benefit ratio and low circulation, these factors prompted the definitive decision to discontinue the journal's publication. The last issue of *Bevolking en Gezin*, the third edition in the 33rd year of its publication, was published in 2005.

The *NIDI/CBGS Publications*, a book series published jointly with the CBGS, is now dormant. Given the available alternatives in its publication programme, NIDI has discontinued its active acquisition aimed at breathing new life into the series. The book series will continue to exist for occasional publications at the specific request of the CBGS. Two such publications have been planned for 2006.

NIDI staff are involved in two European demographic journals. Since 2001, the Institute has provided one of the two editors of the leading international journal, the *European Journal of Population (EJP)*. NIDI also performs editorial activities for the book series *European Studies of Population (ESPO)*. Both are published by Springer/Kluwer under the auspices of the European Association for Population Studies (EAPS). The EJP in particular contributes importantly to raising the Institute's international profile. NIDI staff also contribute to several national and international journals and book series as editors and/or referees.

Public relations and information

Research into population issues is of major importance to society and therefore has immediate relevance to government policy. The findings of demographic research are often interesting to the general public and to students in secondary and higher education. NIDI staff therefore frequently contribute articles to popular publications such as DEMOS and to the printed and broadcast media in

addition to publishing their research findings in scientific books and journals. NIDI researchers also give lectures and presentations, and the Institute is often requested to provide information and to share its insights on population issues.

Website

NIDI's website is targeted at scholars, policy-makers, university and school students and the general public, including the media. In addition to providing general information about the Institute itself, such as its organisation and NIDI staff, the website posts full-text publications (DEMOS, NIDI Reports, Working Papers, etc.) in PDF format and provides Internet links to other – mainly international – demographic organisations and sources of information.

The website also provides information on all ongoing and some concluded research projects and about demographic developments in the Netherlands in the form of an interactive demographic atlas.

From early 2006, visitors to NIDI's website will gain access to the collection of demographic literature of the Institute's library, which is unique in the Netherlands. The Institute is also developing an interactive 'demographic glossary', a searchable database with demographic terms, their definitions and explanatory notes.

Intranet

NIDI has an Intranet for the provision of information for in-house use. The Intranet offers the possibility of providing digital information in a systematic and accessible way. The information provided through the Intranet has Institute-wide relevance, it is more or less sustainable and has a potentially high user value.

Secretarial Services

NIDI's secretarial staff provide administrative and secretarial services for the Institute's directors, its various departments, fellows and scientific associations such as the European Association for Population Studies (EAPS) and the Netherlands Demographic Society (NVD). NIDI's secretaries also contribute to the organisation of scientific events such as workshops and conferences and to the development and maintenance of the Institute's house style, its website, Intranet, project archives and publications.

Employee Representation

The Works Council [*Onderdeelcommissie*, or OC] has five members: Jeroen Berkien, Alinda Bosch, Nicole van der Gaag, Hanna van Solinge (chair) and Helga de Valk (secretary).

In 2005 the Works Council held two consultative meetings with the director and the deputy-director. Additionally, the Works Council held ten regular meetings to discuss ongoing issues and to prepare meetings and recommendations to be submitted to the director such as the NIDI Strategy, Budget and Annual Accounts, Occupational Health and Safety (ARBO), Internal communication and Personal Development Plans (POPs).

Legal status and terms of employment

NIDI staff are employed by the Royal Netherlands Academy of Arts of Sciences (KNAW). The KNAW has a total of about 1,300 employees. This includes both staff employed by the holding (Bureau KNAW) and staff employed by the 16 institutes affiliated with the Academy. The terms of employment of all Academy staff are governed by a collective labour agreement (CAO), which sets out the provisions for primary and secondary conditions of employment such as salaries and benefits, holiday entitlements, leave arrangements and the like. In 2005 the Academy joined the collective labour agreement for Dutch Universities (CAO-NU), thereby harmonising its terms of employment with the academic community.

A Publications in 2005

1. Articles in journals covered by the (Social) Science Citation Index

- Ahmed, M., J. van Ginneken, A. Razzaque, Factors associated with adolescent abortion in a rural area of Bangladesh. In: *Tropical medicine and international health*, 10(2005)2, pp. 198-205.
- Dalen, H. van, G. Groenewold, J. Schoorl, Out of Africa: What drives the pressure to emigrate? In: *Journal of population economics*, 18(2005)4, pp. 741-778.
- Dalen, H. van, A. Klamer, Is science a case of wasteful competition? In: *Kyklos* 58(2005)3, pp. 395-414.
- Dalen, H. van, K. Henkens, The double standard in attitudes toward retirement: The case of the Netherlands. In: *The Geneva papers on risk and insurance: Issues and practice*, 30(2005)4, pp. 693-710.
- Dalen, H. van, G. Groenewold, T. Fokkema, The effect of remittances on emigration intentions in Egypt, Morocco and Turkey. In: *Population studies*, 59(2005)3, pp. 375-392.
- Dalen, H. van, K. Henkens, Signals in science: On the importance of signalling in gaining attention in science. In: *Scientometrics*, 64(2005)2, pp. 209-233.
- Dalen, H. van, A. van Vuuren, Greasing the wheels of trade: A profile of the Dutch transaction sector. In: *De Economist*, 153(2005)2, pp. 139-165.
- Dalen, H. van, K. Henkens, The rationality behind immigration policy preferences. In: *De Economist*, 153(2005)1, pp. 67-83.
- Dykstra, P., T. van Tilburg, J. de Jong Gierveld, Changes in older adult loneliness: Results from a seven-year longitudinal study. In: *Research on aging*, 27(2005)6, pp. 725-747.
- Fischer, T., P. de Graaf, M. Kalmijn, Friendly and antagonistic contact between former spouses after divorce: Patterns and determinants. In: *Journal of family issues*, 26(2005)8, pp. 1131-1163.
- Henkens, K., C. Remery, J. Schippers, Recruiting personnel in a tight labour market: An analysis of employers' behaviour. In: *International journal of manpower*, 26(2005)5, pp. 421-433.
- Henkens, K., Stereotyping older workers and retirement: The managers' point of view. In: *Canadian journal on aging*, 24(2005)4, pp. 35-48.
- Liefbroer, A., The impact of perceived costs and rewards of childbearing on entry into parenthood: Evidence from a panel study. In: *European journal of population — Revue européenne de population*, 21(2005)4, pp. 367-392.
- Popkov, A., Y. Popkov, L. van Wissen, Positive dynamic systems with entropy operator: Application to labour market modelling. In: *European journal of operational research*, 164(2005), pp. 811-828.
- Poppel, F. van, M. Jonker, K. Mandemakers, Differential infant and child mortality in three Dutch regions, 1812-1909. In: *Economic history review*, (2005)2, pp. 272-309.
- Solinge, H. van, K. Henkens, Couples' adjustment to retirement: A multi-actor panel study. In: *Journal of gerontology: Social sciences*, 60B(2005)1, pp. S 11-S 20.

2. Articles in edited books and in other refereed international scientific journals

- Beer, J. de, J. Garssen, Tien jaar GBA als bron van nieuwe demografische statistieken. In: *Bevolking en gezin*, 33(2004)3, pp. 83-93.
- Cozijnsen, R., K. Henkens, H. van Solinge, Laten gaan of behouden?: een vergelijkend onderzoek naar beoordelingen van managers en studenten ten aanzien van uitstroom van oudere werknemers. In: *Gedrag & organisatie*, 18(2005)6, pp. 338-355.
- Doorne-Huiskes, A. van, P. Dykstra, J. Schippers, Mantelzorg in de (tijds)klem. In: *Sociale wetenschappen*, 47(2004)4, pp. 27-48.
- Dykstra, P., De toekomst van het sociaal-demografisch onderzoek naar families in Nederland. In: *Bevolking en gezin*, 33(2004)3, pp. 63-72.
- Dykstra, P., De beste plek ter wereld. In: *Mens en maatschappij*, 80(2005)1, pp. 2-3.
- Dias, J., F. Willekens, Model-based clustering of sequential data with an application to contraceptive use dynamics. In: *Mathematical population studies*, 12(2005)3, pp. 135-157.
- Fokkema, T., J. Steyaert, Achter de geraniums of achter het computerscherm?: ICT als middel ter bestrijding van eenzaamheid bij ouderen. In: *Sociale interventie*, (2005)2, pp. 19-29.
- Fokkema, T., L. van Tongeren, How to esc@pe loneliness?: kwalitatieve evaluatie van een experiment om met ICT uit eenzaamheid te geraken. In: *Sociale interventie*, 14(2005)4, pp. 15-28.
- Henkens, K., H. van Solinge, J. Neuteboom *et al.*, Verrijkt doorwerken: maatschappelijke detachering als alternatief voor vervroegd uittreden. In: *Gids voor personeelsmanagement*, 84(2005)5, pp. 28-31.

- Willekens, F., *Demography and the future of higher education*: Presentation workshop organised by the Center for Educational Research and Innovation, OECD, Paris, 5 December 2005.

C Training and education

Mentoring

Traineeships/theses

In 2005 NIDI supervised the following PhD students or trainees:

Research Training:

Bats, Jan (Master's thesis, Utrecht University, Sociologie), supervision: Dykstra.

Bekke, Susan ter (student trainee, University of Groningen, Sociale geografie), supervision: Van Dalen, Henkens.

Cremers, Madelon (BA thesis, Utrecht University, Sociologie), supervision: Dykstra.

Follana, Cristina (Postdoc – EU Research Training Network (RTN)), supervision: Schoorl.

Hogerbrugge, Martijn (BA thesis, Utrecht University, Sociologie), supervision: Dykstra.

Jonge, Idske de (research trainee, University of Groningen), supervision: Bosch.

Mandemakers, Jornt (Master's thesis, SaSR Research master, Utrecht University, Sociologie), supervision: Dykstra.

Schwierz, Christoph (Postdoc – EU Research Training Network (RTN)), supervision: Beets.

Velladics, Katalin (Postdoc – EU Research Training Network (RTN)), supervision: Van Dalen, Henkens.

PhD students supervised:

Bailey, Ajay (University of Groningen, Population Research Centre (PRC); University of Pune, India; Karnatak University, India), *Risk assessment of HIV/AIDS among male labour migrants in India*. Hutter: PhD supervisor.

Banerjee, Sarbani (University of Groningen, Population Research Centre (PRC)), *Higher education and the reproductive life course. A cross-cultural study of women in Karnataka (India) and the Netherlands*. Hutter, Willekens: PhD supervisors.

Bosch, Alinda (NIDI/University of Groningen, Population Research Centre (PRC)), *Adolescents' reproductive health in rural Bangladesh*, Hutter, Willekens, Van Ginneken: PhD supervisors. PhD awarded 30 June.

Chotkowski, Malgorzata Barbara (Amsterdam University), *Vijftien ladders en een dambord : contacten van Italiaanse migranten in Nederland, 1860-1940*, Van Poppel: member of the opposition, PhD awarded 11 October.

- Doorten, Ingrid (Utrecht University, Interuniversitair Centrum voor Sociaal-Wetenschappelijke Theorievorming en Methodenontwikkeling (ICS)) *Solidarity in partner relationships: relation-specific versus portable investments*. Dykstra: PhD supervisor.
- Duran, Franco (Erasmus University Rotterdam), *Cardiovasculaire ziektepreventie. Van meta-analyses tot levensverwachting*, Willekens: member of Doctorate Committee, PhD awarded 31 August.
- Feijten, Peteke (Utrecht University, Faculteit Geowetenschappen) *Life events and the housing career: A retrospective analysis of timed effects*, Gierveld: member of Doctorate Committee, PhD awarded 25 February.
- Gaalen, Ruben van (Utrecht University, Interuniversitair Centrum voor Sociaal-Wetenschappelijke Theorievorming en Methodenontwikkeling (ICS) / NIDI). *Solidarity and conflict in joint relations*. Dykstra: PhD supervisor.
- Gjaltema, Taeke (University of Groningen), *Demographic scenarios based on expert opinions*. Van Wissen, Willekens: PhD supervisors.
- Haandrikman, Karen (University of Groningen, Population Research Centre (PRC)), *Spatial homogamy: Geographical dimensions of the partner market in the Netherlands*, Hutter, Van Wissen: PhD supervisors.
- Huisman, Corina (University of Groningen/NIDI) *Een demografisch simulatiemodel voor bedrijven: een toepassing in Gelderland* [A demographic simulation model for firms: an application in the province of Gelderland]. Van Wissen: PhD supervisor.
- Janssen, Fanny (Erasmus Universiteit Rotterdam), *Determinants of Trends in Old-Age Mortality. Comparative Studies among Seven European Countries over the Period 1950 to 1999*, Willekens: member of Doctorate Committee, PhD awarded 2 November 2005.
- Keizer, Renske (Utrecht University, Interuniversitair Centrum voor Sociaal-Wetenschappelijke Theorievorming en Methodenontwikkeling (ICS)/NIDI), *Antecedents and consequences of childlessness*. Dykstra: PhD supervisor.
- Khatun, Mohsina (RW-University of Groningen), *Contraceptive use dynamics. Application to the Bangladesh demographic and health survey*. Willekens: PhD supervisor; Dykstra: member of the opposition at PhD defence and member of Reading Committee; Van Ginneken, Hutter: members of Reading Committee. PhD awarded 15 September. Dissertation published, Amsterdam: Dutch University Press, 2005. 202 p. (Population studies).
- Khatun, Moury (University of Groningen), *Life history of cardiovascular disease and its risk factors. Multistate life table approach and application tot the Framingham Heart Study*, Van Ginneken: member of Doctorate Committee, PhD awarded 15 September.

Courses and guest lectures

NIDI's researchers regularly give courses and guest lectures. In 2005 these included:

- Beer, J. de, *Demografie van allochtonen*: guest lecture for 'Master in Migratie- en Integratiestudies', Erasmus University Rotterdam, 28 October.
- Beets, G., *European Master in Gerontology*: lecture VU University Amsterdam, 18 September.
- Bosch, A., *Fertility, population theories and family planning*: lecture for Master students medical anthropology, Faculty of Social and Behavioural Sciences, University of Amsterdam, 22 November.

- Bosch, A., *Primary data collection in developing countries: quantitative and qualitative methods*: lecture for Master students demography, Population Research Centre, Groningen University, 12 October.
- Bruijn, B. de, lecture course 'Population information: data collection and data quality', Groningen University, September.
- Bruijn, B. de, Course fertility theories, European Doctoral School for Demography, Max Planck Institute, Rostock, October-November.
- Bruijn, B. de, lecture course 'Theories of demographic behaviour', Groningen University, September.
- Dykstra, P., *Families, generaties en demografische veranderingen*: lectures Utrecht University, April-July.
- Eelens, F., Course taught: SPSS/statistics.
- Eelens, F., Course taught: demography.
- Gierveld, J., *Families in later life*: guest lectures Graduate Programme, University of Edmonton, Alberta, Canada, 19-25 October.
- Ginneken, J. van, *Introduction demography*: Master in Disease Control Programme, Institute of Tropical Medicine, University of Antwerp, 26-28 October.
- Ginneken, J. van, *Introduction demography*: International Course of Health Development (IChD), Master in Public Health Programme, Amsterdam, Royal Tropical Institute (KIT), 11 October.
- Huisman, C., *Demografie en demometrie*: training course Institute of Actuaries. January-April.
- Liefbroer, A., *De tweede demografische transitie*: guest lecture demography, Groningen University, 29 September.
- Poppel, F. van, *Verbeelding, beleving en patronen van dood en sterfte, 1700-2000*: Master's course economic and social history, Radboud University Nijmegen.
- Poppel, F. van, *Patronen van sterfte in het verleden*: Master's course medical history, VU University Amsterdam/VUmc, college basisprogramma, historische epidemiologie.
- Praag, C. van, *Over individualisering*: guest lecture VU University Amsterdam, 17 October.
- Reijer, D., Resource Flows database training offered to UNAIDS staff, The Hague, 24-25 November.
- Reijer, D., J.Eckhardt-Gerritsen and M.Reuser, Training course on Resource Flows domestic data collection and processing offered to staff of the Indian Institute of Health Management Research IIHMR, The Hague, 1-12 August.
- Schoorl, J., Presentations (7) in UNECE-UNFPA-NIDI Training programme on international migration, Geneva, 24-28 January.
- Valk, H. de, *Background of migration and demographic characteristics of migrants in the Netherlands*: lecture Population Research Centre, University of Groningen, 23 September.
- Valk, H. de, *Partnerships among migrants in the Netherlands: behaviour and preferences*: lecture MERM, Utrecht University, 24 October.

D Participation in organisations

NIDI staff served on the following committees in 2005:

Anton Kuijsten Foundation for Applied Demography. *Willekens*: Chair, *Van Nimwegen*: Member of the Board.

Commissie toekomstverkenning sociologie. *Dykstra*: Member.

Committee Teulings for the reform of the economics exam programme Havo/VWO. *Van Dalen*: Secretary.

Council of Europe, European Population Committee. *Van Nimwegen*: Member.

Dalen, H. van, Nominated candidate for the Nobel prize in economic science 2005, Sweden.

Deutsche Forschungsgemeinschaft; beoordelingscommissie 'Schwerpunktprogramm 'Beziehungs- und Familienpanel'. *Liefbroer*: Member.

Dutch Council of Economic Advisors (REA). *Van Dalen*: Secretary.

Economic and Social Research Council (ESRC), UK. Selection Panel for Hub and Nodes of the National Centre for Research Methods. *Willekens*: Member.

European Association for Population Studies (EAPS). *Van Nimwegen*: Vice-President, *Beets*: Executive Secretary.

- Committee on Education. *Willekens*: Chair.
- Working group on international migration. *Schoorl*: Member Steering Committee.
- Working group on 'The second demographic transition'. *Liefbroer*: Co-chair with Francesco Billari.

European School of Demography, Rostock. *Willekens*: Chairman Scientific Board.

European Science Forum, Programme Committee ESOF2006, *Willekens*: Member.

European Science Foundation, Strasbourg.

- Steering Committee Programme 'Quantitative methods in social sciences programme (QMSS)'. *Willekens*: Member.
- Topic theme 'Methods and theories of longitudinal analysis', Quantitative methods in social sciences programme (QMSS). *Willekens*: Chair.

Foundation for the Historical Sample of the Dutch Population. *Van Poppel*: Secretary.

- Research 'Historical Sample of the Dutch Population of Zeeland'. *Van Poppel*: Member Supervisory Committee.

International Max Planck Research School for Demography, Rostock.

- Consortium Council. *Willekens*: Chair.
- Evaluation Committee. *Willekens*: Member.

International Union for the Scientific Study of Population (IUSSP). *Van Nimwegen*: Secretary-General/Treasurer.

Karnatak University, Dharwad, India, International diploma course on reproductive health management. *Willekens*: Vice-chairman Steering committee.

Landelijk Orgaan Wetenschappelijke Integriteit (LOWI-KNAW). *Dykstra*: Member.

Max Planck Gesellschaft, Munich. Search Committee Max Planck Institute for demographic research. *Willekens*: Director.

Nationale Zorgvernieuwingsprijs. *Gierveld*: Member of jury.

Netherlands Organisation for Scientific Research (NWO). *Gierveld*: Member.

- Committee VIDI-2005, *Gierveld*: Chair, *Dykstra*: Member.
- Programme Committee 'De bindende kracht van familierelaties' [The ties that bind]. *Gierveld*: Chair, *Dykstra*: Advisory Member.
- Commissie IASA-Nederland. *Willekens*: Member.
- Taskforce Grootchalige Onderzoeksfaciliteiten. *Gierveld*: Member.
- NWO-project 'Aging societies: human victory or evolutionary trap?'. VU University Amsterdam. *Liefbroer*: Member Supervisory Committee.

Netherlands Demographic Society [Nederlandse Vereniging voor Demografie]. *Van Wissen*: Vice-President, *Fokkema*: Secretary.

Netherlands Institute for Spatial Research [Ruimtelijk Planbureau]. *Willekens*: Member Monitoring Committee representing KNAW.

Onderzoek 'Evaluatie van de remigratiewet' (ITS in opdracht van WODC), Ministerie van Justitie, August-December 2005, *Spaan*: Member Supervisory Committee.

Onderzoek 'Islam in de multiculturele samenleving', Erasmus University Rotterdam. *Liefbroer*: Member Supervisory Committee.

Robert Bosch Stiftung, Stuttgart. Expertenkommission 'Familie und demographischer Wandel'. *Willekens*: Member.

Royal Netherlands Academy of Arts and Sciences (KNAW) [Koninklijke Nederlandse Akademie van Wetenschappen]. *Dykstra*, *Gierveld*, *Van de Kaa*, *Willekens*: Members.

- Department of Behavioural and Social Sciences [Sectie Gedrags- en Maatschappijwetenschappen]. *Dykstra*, *Gierveld*, *Van de Kaa*, *Willekens*: Members.
- Dr Hendrik Muller Award for Behavioural and Social Sciences, [Dr Hendrik Muller Prijs voor de Gedrags- en Maatschappijwetenschappen]. *Willekens*: Member of the Committee.
- Dr. A.H. Heinekenprijs voor de Milieuwetenschappen. *Willekens*: Member of jury.

Scientific committee of the Joint Eurostat-UNECE work session on demographic projections, Vienna, 21-23 September. *Willekens*: Member.

ShareNet. Working group 'Sexual and reproductive health', *Bosch*: Member.

SISWO, Instituut voor Maatschappijwetenschappen, Advisory Council. *Dykstra*: Member.

Statistics Netherlands (CBS) [Centraal Bureau voor de Statistiek]:

- Demography Platform. *De Beer*: Member.

Stichting Geron. *Fokkema*: Member of the Board.

United Nations:

- United Nations Commission on Population and Development [VN Bevolkingscommissie]. *Van Nimwegen*: Expert.
- UN programme 'Gender and Generation Survey', Analyses Working Group. *Gierveld*: Chair.

How to get there

Address:

NIDI is based at Lange Houtstraat 19, in The Hague city centre, near the Parliament (Binnenhof).

By train:

From *Central Station*:

- walk towards the centre via Herengracht and Korte Poten to Plein. Turn right into Lange Houtstraat (less than ten minutes walk);

- or take tram number 16 or 17 (direction centre). Alight at Korte Voorhout. Lange Houtstraat is the second street on your left.

From *Hollands Spoor* Station:

- take tram number 17 (direction Statenkwartier); alight at Korte Voorhout; Lange Houtstraat is the second street on your left;
- or take tram number 16 (direction Central Station), alight at Korte Voorhout; then walk back and take the second street on your left.

By car:

There is limited paid on-street parking in Lange Houtstraat (one waystreet from Korte Voorhout towards Plein) and in the surrounding streets. It is usually possible to find space in the car parks under the nearby Plein, and under Malieveld. Parking here is a little cheaper.

F List of abbreviations

ARBO	Occupational Health and Safety
ASEF/EAAS	Asia-Europe Foundation and the European Alliance for Asian Studies
CAHP	Europese Bevolkingscommissie van de Raad van Europa
CANBI	Computer Administratie NIDI Bibliotheek
